Exp. No. 11

APPLICATION DEPLOYMENT AND MIGRATION IN ZOHO CREATOR

AIM

To deploy and migrate a Zoho Creator application (**Gym Membership Enrollment**) across the Development, Stage and Production environments using the Environments feature, and to publish a new version (V2.0) of the application from Stage to Production without affecting the live users.

PROCEDURE

Step 1: Make changes in the Development environment

Go to **Applications** on the home page. On the app card, the **Environment** drop-down lists the options for each environment: under **Development** – Edit, Access and Settings; under **Stage** – Access and Settings; and **Open in Environment** at the bottom. Choose **Edit** under Development and make the required improvements to the application — adding an **Emergency Contact Number** field to the Membership_Enrollment_Form and updating the All Gym Membership Enrollments report. These changes are visible only to the developer until they are published.

Step 2: Select the components to publish to Stage

Open **Open in Environment** (Environments page), click **Publish** and choose **Publish to Stage**. The *Staging – Publish to Stage Environment* screen lists every component that changed under Forms > Gym Membership Enrollment Form — the new **Emergency Contact Number** field under Fields > Contact Details — and under Reports, the **All Gym Membership Enrollments** report. Both components are selected (Selected Components: 2) and **Proceed** is clicked to carry them forward to the publish dialog.

Step 3: Publish the changes to the Stage environment

Fill in the following details: **Title** (*Gym Membership Enrollment 2.0*), **Description** (*enhanced customer service*), **Type** (**Major**, for enhancements and updates) and the **Email Notification** address. The right side shows the **Application Versions** table, where the version changes from **V1.0 to V2.0**. A warning states that the application will be set to maintenance mode and will be inaccessible until the publish is complete. Click **Publish**.

OUTPUT

After the Stage publish completes and the same version is subsequently published to Production, the Environments page shows the final deployed state of the application.

Output 1: Environments page — Gym Membership Enrollment at Version 2.0 in both Stage and Production

Both the **Stage** and **Production** columns now display **Version 2.0** dated Oct 06, 2026, and the status **"No changes available"** confirms that the Development copy, the Stage copy, and the Production copy are now identical. This shows that the updated Gym Membership Enrollment application (with the new Emergency Contact Number field and report changes) was successfully migrated from Stage to Production and is now available to the end users.

RESULT

Thus, the Gym Membership Enrollment application was successfully deployed and migrated in Zoho Creator. Changes were made in the Development environment, the updated components were selected and published to Stage as Version 2.0 after testing, and the version was then published from Stage to Production using the Environments feature — making the enhanced application available to all users without affecting them during the update.
