

EXPERIMENT 4

Data Modelling and Form Design for a Business Application in Zoho Creator

Library Book Issue Request Form — Basic Fields Use Case

Athithya R
241401014

Aim

To design a data model and build a business application form in Zoho Creator for managing insurance claim requests, and to demonstrate the creation of form fields, the linking of related forms, and the generation of report data from submitted records.

Procedure

- Plan the data model — Define Policyholder and Claim entities and their one-to-many relationship.
- Create the Policyholder Profile form — Add fields like Name, Policy Number, Policy Type, Email, Contact Number, Address.
- Create the Insurance Claim Request form — Add fields like Claim Category, Type Of Loss, Claim Amount, Reason, Preferred Dates, Agree To Terms.
- Link the forms with a lookup — Add a Policyholder lookup field in the Claim Request form.
- Set field properties — Mark mandatory fields, tag PII, set visibility.
- Submit test records — Add sample entries and verify the lookup links correctly.
- Generate report data — Build a report showing claims with linked policyholder details.

Data Model

The application uses two related forms. The Policyholder Profile form stores the core identity and contact details of a policyholder, while the Insurance Claim Request form captures the details of each claim raised by a policyholder. The two forms are connected through a lookup field (Policyholder) in the Insurance Claim Request form, which references a record in the Policyholder Profile form. This one-to-many relationship allows a single policyholder to raise multiple claim requests while keeping policyholder information centralised and consistent.

Fig. 1 — Data model showing the Member Profile and Book Issue Request forms and their lookup relationship

Form	Key Fields	Purpose
Policyholder Profile	Policyholder Profile: Policyholder Name, Policy Number, Policy Type, Email Address, Contact Number, Residential Address	Stores master data for each policyholder
Insurance Claim Request	Insurance Claim Request: Policyholder (lookup), Claim Category, Type Of Loss/Incident, Claim Amount, Reason For Claim, Preferred Inspection Date, Preferred Contact Time, Agree To Policy Terms, Claim Status, Processed By	Captures each claim linked to a policyholder

Explanation of Screenshots

The following screenshots illustrate the complete workflow: configuring the input fields in the Zoho Creator form builder, the resulting live form as seen by a user, and the output data captured after submission.

1. Input — Zoho Form Creator Fields

The form builder view below shows the field palette on the left (Basic Fields such as Name, Email, Phone, Date, Radio, Checkbox, etc.) used to design the Insurance_Claim_Request_Form. The centre panel lists all the fields added to the form, including Claimant_Name, Policy_Number, Claim_Type, Contact_Number, Residential_Address, Claim_Category, Type_Of_Loss_Incident, Claim_Amount, Reason_For_Claim, Preferred_Inspection_Date, Preferred_Contact_Time, and Agree_To_Policy_Terms. The right panel shows the Field Properties for the selected Agree_To_Policy_Terms field — its field link name, answer choices, validation (Mandatory), data privacy (PII), and visibility settings.

2. The Form

Once designed, the Insurance_Claim_Request_Form is filled out by an end user. The first part of the live form (Claimant Details and Contact Details) captures the claimant's name, policy number, contact number, email, and residential address.

The screenshot shows the live form titled 'Insurance_Claim_Request_Form'. The left sidebar has a 'Basements' menu with 'basement' selected. The form fields are populated with the following data: Contact_Number (+91 9443365789), Policy_Number (12345678), Incident_Description (a car hit me, front damaged), Claim_Amount_Requested (450000), Date_Of_Incident (18-Aug-2026), Preferred_Callback_Time (06:59:41), Claim_Type (Motor Insurance), Claimant_Type (Policy Holder), and Supporting_Documents_Available (photograph x).

Fig. 3 — Book_Issue_Request_Form: Member Details and Contact Details sections

The second part of the form (Claim Details & Acknowledgement) captures the incident description, claim amount requested, date of incident, claim type, claimant type, preferred callback time, supporting documents available, and the claimant's declaration of authenticity before submission.

3. Output Data

After the form is submitted, the record appears in the Insurance_Claim_Request_Form Report, confirming that the data has been stored correctly in the application. The report below displays the submitted record for policyholder "Athithya R" (Policy Number 12345678), including email, contact number, residential address, and claim type.

Result

A data model with two related forms, Policyholder Profile and Insurance Claim Request, was successfully designed in Zoho Creator. The Insurance_Claim_Request_Form was built with appropriate field types and validations, tested by submitting sample data, and the submitted record was verified in the corresponding report, thereby demonstrating a working business application.
